

Mit dem Befehl `nsrports -a` können Sie jetzt alle vom NetWorker benutzten Ports überprüfen !

Dieser relativ neue Befehl ist für die verschiedenen Entwicklungsreihen **ab diesen Versionen** verfügbar:

8.1.2.4
8.1.3.0
8.2.0.6
8.2.1.0
9.0.0.0

Und so benutzen sie den Befehl

```
nsrports -a [ -n ] [ -f {inet|inet6} ]
```

- n die Anzeige erfolgt mit IP Adressen statt mit Hostnamen (default)
- f bestränkt die Anzeige auf IPv4 bzw. IPv6 Adressen

Auf den nächsten Seiten finden Sie ein Beispiel für einen frisch installierten NetWorker 9.0 Server.

```

E:\nsr\bin>nsrports -a
