

NetWorker CloudBoost & ECS-CE

For my test purposes, I intentionally wanted to use his environment:

- NetWorker CloudBoost 19.7.0.0
- Data Domain DDVE 7.7.0.0
- ECS-CE 3.7.0.0

In the appropriate literature you will find the notice, that NetWorker with CloudBoost OVA will not support an ECS-CE. This usually means that Dell/EMC has not fully tested and approved this configuration - however, it does not necessarily mean that it will not run at all. In most cases you could at least use it for test purposes.

In this case I can enlighten you - this configuration does really not work at all.

If you want to connect the CloudBoost solution with an ECS, please read my next document [nw_cboost_2.pdf](#) for a possible solution.
